

(2½ Hours)

[ Total Marks : 75

N.B. : (1) Attempt all questions.

(2) All questions carry equal marks.

(3) Draw neat labeled diagrams wherever necessary.

1. (a) Explain the following terms: (Any three) 3
- |                      |                          |
|----------------------|--------------------------|
| i) Heteroduplex DNA  | ii) Hfr strain           |
| iii) Helper phage    | iv) Host range property  |
| v) Transducing phage | vi) Homoallelic mutation |
- 1.b) Elaborate the following: (any two) 12
- Genetic mapping in bacteria by generalized transduction
  - Production of F<sup>1</sup> factor
  - Defining of genes by cis-trans tests
  - Natural transformation in bacteria
2. a) State the significance of: (any three) 3
- |                          |                                   |
|--------------------------|-----------------------------------|
| i) VirG protein          | ii) OriT                          |
| iii) Golden rice         | iv) Nopaline                      |
| v) Right border sequence | vi) Scorable marker/Reporter gene |
- 2.b) Attempt the following (any two) 12
- Describe the mechanism of T-DNA transfer and integration in to plant genome.
  - Particle gun method of gene delivery is an efficient method. Justify.
  - Give an account of development of insect resistant plants with example.
  - Enlist the advantages and disadvantages of genetically modified crops.
- 3.a) Give the importance of: (any three) 3
- |                       |                           |
|-----------------------|---------------------------|
| i) Enucleation        | ii) Pregnant mare's serum |
| iii) ES cells         | iv) Gancyclovir           |
| v) Antifreeze protein | vi) DNA microinjection    |

b) Discuss the following: (any two)

- i) Cloning live stock by nuclear transfer.
- ii) Transgenic fish as biosensor.
- iii) Applications of transgenic sheep.
- iv) Any one method for producing transgenic mouse.

12

4.a) Explain the following terms (any three):

- i) Replicative transposition
- ii) Non-autonomous transposable elements
- iii) Constitutive gene
- iv) lac I<sup>s</sup>mutant
- v) O<sup>c</sup>mutant
- vi) Leader peptide

3

4. b) Give an account of the following: (any two)

- i) Types of prokaryotic transposons
- ii) Differences between composite and non-composite transposons
- iii) Molecular model of attenuation of the trp operon
- iv) Effects of repressor mutations with reference to lac operon

12

5. Write Short notes on (any three)

- i) Virus mediated gene transfer in plants.
- ii) Production and significance of edible vaccines.
- iii) Use of transgenic mice as models for Alzheimers disease
- iv) Life cycle of  $\lambda$  phage
- v) Role of c AMP in the functioning of lac operon
- vi) Kernel color in corn and transposon effects

15
