MBSC Sem-VT Real & Complex Analysis2016-2017

QP Code: 77150

(21/2 Hours)

[Total Marks:75

N.B.: (1) All questions are compulsory.

(2). Figures to the right indicate full marks.

(3) Use of logarithmic table/non programmable calculator is allowed. Physical constants:

 $N = 6.022 \times 10^{-23}$ $k = 1.38 \times 10^{-23}$ JK⁻¹ F = 96500 Coulombs R = 8.314 JK⁻¹mol⁻¹ $h = 6.626 \times 10^{-34}$ Js $c = 3.0 \times 10^8$ ms⁻¹ $\frac{2.303\text{RT}}{\text{F}} = 0.0592$ at 298K Mass of electron = 9.109×10^{-31} kg 1 amu = $931\text{MeV} = 1.66 \times 10^{-27}$ kg $\pi = 3.142$ C = 12 amu H = 1 amu O = 16 amu Br = 80 amu

1. Attempt any three of the following:-

- (A) Derive an expression for wave number of P-branch and R-branch lines in a vibrational rotational spectrum of a diatomic molecule.
- (B) The equilibrium internuclear distance in the molecule of HBr is 142.0 pm. Calculate the frequency separation between successive lines in pure rotational spectrum in m⁻¹.
- (C) Calculate the number of modes of vibration in the molecule of CO₂ using appropriate expression, draw them. Giving reason, predict which modes are IR active and which one/s are Raman active.
- (D) The vibrational frequency of CO molecule is 2.51x10¹³ s⁻¹. Assuming vibrations to be harmonic, Calculate (i) vibrational frequency for the molecule in m⁻¹, (ii) the force constant of the bond.
- (E) Derive the expression for moment of inertia of a diatomic molecule with masses m_1 and m_2 separated by internuclear distance 'r'.

(F) Answer the following:-

- (a) Define dipole moment.
- (b) Why some molecules have zero dipole moment where as others possess dipole moment?
- (c) Explain the geometry of BF₃ and NH₃ on basis of dipole moment.
