

Time: 3 Hours

Total Marks: 80

N.B.: (1) Question No.1 is compulsory.

(2) Attempt any three questions from the remaining five questions.

(3) Make suitable assumptions wherever necessary but justify your assumptions.

1. (a) Differentiate DFA and NFA. 05
 (b) Design a DFA to accept string of 0's and 1's ending with the string 100. 05
 (c) Explain the applications of Regular Expressions. 05
 (d) What are Recursive and Recursively Enumerable Languages? 05
2. (a) Design NFA for recognizing the strings that end in "aa" over $\Sigma = \{a, b\}$ & convert above NFA to DFA. 10
 (b) Design moore m/c for following:- 10
 If input ends in '101' then output should be A, if input ends in '110' output should be B, otherwise output should be C and convert it into mealy m/c.
3. (a) Obtain a regular expression for the FA shown below: 10

- (b) Explain the types of Turing machine in detail. 10
4. (a) Design a turing machine that computes a function $f(m, n) = m + n$ i.e. addition of two integers. 10
 (b) State and explain pumping Lemma for Context Free Languages. Find out whether the language $L = \{x^n y^n z^n \mid n \geq 1\}$ is context free or not. 10
5. (a) Design PDA for the following language: 10
 $L(M) = \{wcw^R \mid w \in \{a, b\}^*\}$ where w^R is reverse of w & c is a constant.
 (b) Convert the following Grammars to the Chomsky normal form (CNF). 10
 $S \rightarrow 0A0 \mid 1B1 \mid BB$
 $A \rightarrow C$
 $B \rightarrow S \mid A$
 $C \rightarrow S \mid \epsilon$
6. Write detailed note on (any two):- 20
 (a) Post Correspondence Problem
 (b) Halting Problem.
 (c) Rice's Theorem.
