

(Time: 3 Hours)

[Total Marks: 80]

- N.B:** (1) Question No.1 is compulsory.
 (2) Solves any three out of remaining question.
 (3) Assume suitable data if necessary.

- Q.1** Solve any Four
- State the phases of new product development. 05
 - What are the metrics in software designing? 05
 - What is shielding? Explain with neat diagram. 05
 - State clearly the limitations and advantages of the Spiral model in EPD. 05
 - What is the difference between active and passive component. 05
- Q.2**
- Design the front panel of a function generator by taking care of ergonomics and aesthetic design considerations. 10
 - Explain the concept of coupling and cohesion. 10
- Q.3**
- Explain the V Cycle model with all the steps and proper justification. 10
 - What is the need of PCB testing? Explain the following methods of PCB testing in details:- 10
 - In-circuit testing
 - Functional testing
 - Boundary scan testing
 - Complex board testing
- Q.4**
- What is the role of characterization in case of debugging and troubleshooting? 10
 - Explain how mapping of functions to hardware is done in architectural design. 10
- Q.5**
- Write the checklist for developing effective Manuals for the international Market. 10
 - How to handle EMI/EMC issues in an Electronic Product? 05
 - Explain the need of ESD Protection in PCB Designing. 05
- Write short note on (any four)
- Q.6**
- Different grounding methodologies 05
 - Need of Prototyping 05
 - Black box testing and white box testing 05
 - Different types of termination methods used in PCB designing 05
 - Different software models with advantage and disadvantage 05
