

Duration: 3 Hours

Marks: 80

Note:

- 1) Q.1 is **compulsory**.
- 2) Attempt any **three** questions from the remaining **five** questions.
- 3) Assume Suitable data wherever necessary

Q1. Attempt any four

20

- a) Why LAN is placed close to outdoor unit?
- b) What are the space particles? What is the impact on satellite? The TWT has limited life and less reliable to other subsystems justify
- c) Explain different orbital parameters
- d) Explain design considerations of Earth station
- e) Differentiate window and frame organization

Q2. a) What is EIRP, Discuss importance of [G/T] ratio. Calculate Overall [C/N] for a satellite link, if [C/N] up link =25dB and [C/N] downlink=20dB and intermodulation noise =13dB

10

b) Explain

- 1) Input Back off and output back off
- 2) AM/PM Conversion

Q3 a) Define 'Satellite perturbation', their causes and effects

10

b) What are different types of lasers used for satellite communication? Explain acquisition link model for optical communication

10

Q4 a) What is meant by sub-system reliability & its Characteristics? Hence explain the terms:- initial failure, random failure & wear-out failure

10

b) With the help of block diagram explain transmit receive type of earth station

10

Q5 a) Explain SPADE system and SCPC of FDMA

10

b) Explain earth Eclipse of satellite with neat sketches. State & Derive the period & duration of eclipse before & after equinox. Also explain the Sun Transit

10

Q6. Write short note on any TWO

20

- a) Onboard connectivity with transparent processing
- b) VSAT and GPS
- c) TTC

59556
