B.E. Electrical (Electronics & Power) Engineering / Electronics & Telecommunication / Communication Engg. / Electronics Engg. Sixth Semester

EP603 / ET603 / EN603 - Control Systems-I / Control System Engineering

P. Pages: 3
Time: Three Hours

GUG/W/18/1684

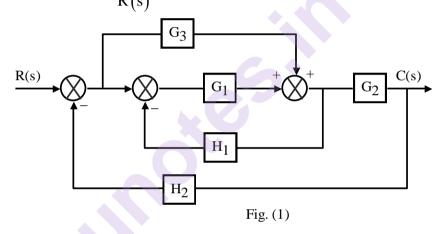

Max. Marks: 80

Notes: 1. All questions carry equal marks.

- 2. Answer **five** questions among the internal choices.
- 3. Due credit will be given to neatness and adequate dimensions.
- 4. Illustrate your answers wherever necessary with the help of neat sketches.
- 5. Use of Non-Programmable calculator is permitted.
- 1. a) Define 'Open Loop' and 'Closed Loop' control system. Give some examples.

Obtain the transfer function $\frac{C(s)}{R(s)}$ for the following system as shown in Fig. (1).

6

OR

- 2. a) Explain the different terms related with the signal flow graph. Also explain the Mason's gain formula.
 - b) For the block diagram shown in Fig. 2. Draw signal flow graph & hence find the closed loop transfer function using Mason's gain formula.

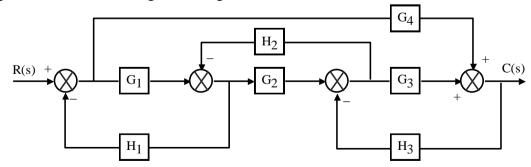

Fig. (2)

3.	a)	Define the terms: i) Delay time ii) Rise time iii) Peak time iv) Peak overshoot v) Setting time	6
	b)	For a unity Feedback system: $G(s) = \frac{200}{s(s+2)}$ Find time domain specifications and output for a unit step input.	10
		OR	
4.	a)	Define and derive the expression for Rise time. Unit step as the input subjected.	6
	b)	$G(s) = \frac{10(s+1)}{s^2(s+2)(s+10)}$ for unity feedback system, determine:	10
		i) Type of the system ii) All error constants	
		iii) Steady state error for $r(t)=1+4t+\frac{t^2}{2}$.	
5.	a)	Define "Stability" of any control system. Explain its types with examples.	8
	b)	Determine the stability for $s^6 + 2s^5 + 8s^4 + 12s^3 + 20s^2 + 16s + 16 = 0$. by using Routh's criteria.	8
		OR	
6.		Sketch the root locus for the open loop transfer function of a unity feedback control system given below and determine: $G(s) = \frac{K}{s(s+1)\left(s+3\right)}$ i) The value of K for $\xi = 0.5$ ii) The value of K for marginal stability iii) The value of K at $S = -4$.	16
7.	a)	Define: i) Resonance Peak ii) Resonant frequency iii) Bandwidth iv) Gain Margin v) Phase Margin	6
	b)	Sketch Bode Plot for the following. $G(s) H(s) = \frac{10}{s(s+1)(s+5)}$	10

OR

Determine the gain cross over frequency, phase margin, gain margin. Comment on stability of the system.

8. Explain Nyquist stability criterion and its significance. a)

10

6

- Sketch the polar plot for the following transfer function. b)
 - $G(s) \cdot H(s) = \frac{10}{s(s+1)(s+2)}$
- 9. Comment on the following statement: a)

6

"Transfer function is unique but state variables are non-unique".

The closed Loop transfer function of the system is given below: b)

10

$$\frac{C(s)}{R(s)} = \frac{24}{(s+1)(s+2)(s+3)}$$

Derive two different state models for the system.

OR

Define: **10.** a)

State variables

ii) State space

iii) State

- iv) State trajectory
- Explain different types of state model. b)

Determine the system transfer function using the following state equation. c)

$$\begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} -5, & -1 \\ 3 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} + \begin{bmatrix} 2 \\ 5 \end{bmatrix} U$$

$$Y = \begin{bmatrix} 1 & 2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix}.$$
