

The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

**PHYSICAL SETTING
CHEMISTRY**

Wednesday, January 28, 2015 — 1:15 to 4:15 p.m., only

The possession or use of any communications device is strictly prohibited when taking this examination. If you have or use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

This is a test of your knowledge of chemistry. Use that knowledge to answer all questions in this examination. Some questions may require the use of the *2011 Edition Reference Tables for Physical Setting/Chemistry*. You are to answer *all* questions in all parts of this examination according to the directions provided in this examination booklet.

A separate answer sheet for Part A and Part B–1 has been provided to you. Follow the instructions from the proctor for completing the student information on your answer sheet. Record your answers to the Part A and Part B–1 multiple-choice questions on this separate answer sheet. Record your answers for the questions in Part B–2 and Part C in your separate answer booklet. Be sure to fill in the heading on the front of your answer booklet.

All answers in your answer booklet should be written in pen, except for graphs and drawings, which should be done in pencil. You may use scrap paper to work out the answers to the questions, but be sure to record all your answers on your separate answer sheet or in your answer booklet as directed.

When you have completed the examination, you must sign the statement printed on your separate answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet and answer booklet cannot be accepted if you fail to sign this declaration.

Notice. . .

A four-function or scientific calculator and a copy of the *2011 Edition Reference Tables for Physical Setting/Chemistry* must be available for you to use while taking this examination.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.

Part A

Answer all questions in this part.

Directions (1–30): For *each* statement or question, record on your separate answer sheet the *number* of the word or expression that, of those given, best completes the statement or answers the question. Some questions may require the use of the *2011 Edition Reference Tables for Physical Setting/Chemistry*.

- 1 According to the modern model of the atom, the nucleus of an atom is surrounded by one or more
 - (1) electrons
 - (2) neutrons
 - (3) positrons
 - (4) protons
- 2 Which particle has a mass of approximately 1 atomic mass unit?
 - (1) an alpha particle
 - (2) a beta particle
 - (3) an electron
 - (4) a neutron
- 3 A specific amount of energy is emitted when excited electrons in an atom in a sample of an element return to the ground state. This emitted energy can be used to determine the
 - (1) mass of the sample
 - (2) volume of the sample
 - (3) identity of the element
 - (4) number of moles of the element
- 4 According to the wave-mechanical model, an orbital is defined as the
 - (1) circular path for electrons
 - (2) circular path for neutrons
 - (3) most probable location of electrons
 - (4) most probable location of neutrons
- 5 All phosphorus atoms have the same
 - (1) atomic number
 - (2) mass number
 - (3) number of neutrons plus the number of electrons
 - (4) number of neutrons plus the number of protons
- 6 At STP, which element is a good conductor of electricity?
 - (1) chlorine
 - (2) iodine
 - (3) silver
 - (4) sulfur
- 7 Which phrase describes the molecular structure and properties of two solid forms of carbon, diamond and graphite?
 - (1) the same molecular structures and the same properties
 - (2) the same molecular structures and different properties
 - (3) different molecular structures and the same properties
 - (4) different molecular structures and different properties
- 8 Which quantity is equal to one mole of Au?
 - (1) the atomic mass in grams
 - (2) the atomic number in grams
 - (3) the mass of neutrons in grams
 - (4) the number of neutrons in grams
- 9 Given the balanced equation representing the reaction between methane and oxygen:
$$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$$
According to this equation, what is the mole ratio of oxygen to methane?
 - (1) $\frac{1 \text{ gram O}_2}{2 \text{ grams CH}_4}$
 - (2) $\frac{1 \text{ mole O}_2}{2 \text{ moles CH}_4}$
 - (3) $\frac{2 \text{ grams O}_2}{1 \text{ gram CH}_4}$
 - (4) $\frac{2 \text{ moles O}_2}{1 \text{ mole CH}_4}$
- 10 Which list includes three types of chemical reactions?
 - (1) decomposition, single replacement, and solidification
 - (2) decomposition, single replacement, and double replacement
 - (3) solidification, double replacement, and decomposition
 - (4) solidification, double replacement, and single replacement

- 11 Which compound has the greatest percent composition by mass of sulfur?
(1) BaS (3) MgS
(2) CaS (4) SrS
- 12 Two molecules of HBr collide and then form H₂ and Br₂. During the collision, the bonds in the HBr molecules are
(1) broken as energy is absorbed
(2) broken as energy is released
(3) formed as energy is absorbed
(4) formed as energy is released
- 13 Which atom in the ground state has a stable electron configuration?
(1) carbon (3) neon
(2) magnesium (4) oxygen
- 14 Which statement describes a multiple covalent bond?
(1) Two electrons are shared.
(2) Four electrons are shared.
(3) Two electrons are transferred.
(4) Four electrons are transferred.
- 15 The electronegativity difference between the atoms in a molecule of HCl can be used to determine
(1) the entropy of the atoms
(2) the atomic number of the atoms
(3) the first ionization energy of the atoms
(4) the polarity of the bond between the two atoms
- 16 Which two gases can *not* be broken down by chemical means?
(1) CO and He (3) Xe and He
(2) CO and NH₃ (4) Xe and NH₃
- 17 Two substances in a mixture differ in density and particle size. These properties can be used to
(1) separate the substances
(2) chemically combine the substances
(3) determine the freezing point of the mixture
(4) predict the electrical conductivity of the mixture
- 18 Which unit is used to express an amount of thermal energy?
(1) gram (3) joule
(2) mole (4) pascal
- 19 Under which conditions of temperature and pressure does a real gas behave most like an ideal gas?
(1) low temperature and low pressure
(2) low temperature and high pressure
(3) high temperature and low pressure
(4) high temperature and high pressure
- 20 According to the kinetic molecular theory for an ideal gas, all gas particles
(1) are in random, constant, straight-line motion
(2) are separated by very small distances relative to their sizes
(3) have strong intermolecular forces
(4) have collisions that decrease the total energy of the system
- 21 Which mathematical expression represents the heat of reaction for a chemical reaction?
(1) (the heat of fusion) – (the heat of vaporization)
(2) (the heat of vaporization) – (the heat of fusion)
(3) (the potential energy of the products) – (the potential energy of the reactants)
(4) (the potential energy of the reactants) – (the potential energy of the products)
- 22 At 101.3 kPa and 298 K, a 1.0-mole sample of which compound absorbs the greatest amount of heat as the entire sample dissolves in water?
(1) LiBr (3) NaOH
(2) NaCl (4) NH₄Cl
- 23 For a reaction at equilibrium, which change can increase the rates of the forward and reverse reactions?
(1) a decrease in the concentration of the reactants
(2) a decrease in the surface area of the products
(3) an increase in the temperature of the system
(4) an increase in the activation energy of the forward reaction

- 24 Which reaction produces ethanol?
(1) combustion (3) fermentation
(2) esterification (4) polymerization
- 25 The chemical process in which electrons are gained by an atom or an ion is called
(1) addition (3) reduction
(2) oxidation (4) substitution
- 26 Which process occurs in an operating voltaic cell?
(1) Electrical energy is converted to chemical energy.
(2) Chemical energy is converted to electrical energy.
(3) Oxidation takes place at the cathode.
(4) Reduction takes place at the anode.
- 27 What can be explained by the Arrhenius theory?
(1) the behavior of many acids and bases
(2) the effect of stress on a phase equilibrium
(3) the operation of an electrochemical cell
(4) the spontaneous decay of some nuclei
- 28 According to one acid-base theory, a water molecule acts as an acid when the molecule
(1) donates an H^+ ion
(2) accepts an H^+ ion
(3) donates an OH^- ion
(4) accepts an OH^- ion
- 29 Positrons and beta particles have
(1) the same charge and the same mass
(2) the same charge and different masses
(3) different charges and the same mass
(4) different charges and different masses
- 30 Which term identifies a type of nuclear reaction?
(1) transmutation (3) deposition
(2) neutralization (4) reduction
-

Part B-1

Answer all questions in this part.

Directions (31–50): For each statement or question, record on your separate answer sheet the number of the word or expression that, of those given, best completes the statement or answers the question. Some questions may require the use of the 2011 Edition Reference Tables for Physical Setting/Chemistry.

31 What is the number of electrons in an Al^{3+} ion?

- (1) 10 (3) 3
(2) 13 (4) 16

32 The valence electron of which atom in the ground state has the greatest amount of energy?

- (1) cesium (3) rubidium
(2) lithium (4) sodium

33 The numbers of protons and neutrons in each of four different atoms are shown in the table below.

Protons and Neutrons in Four Different Atoms

Atom	Number of Protons	Number of Neutrons
A	8	8
D	9	9
E	9	10
G	10	10

Which two atoms represent isotopes of the same element?

- (1) A and D (3) E and D
(2) A and G (4) E and G

34 Which elements have the most similar chemical properties?

- (1) boron and carbon
(2) oxygen and sulfur
(3) aluminum and bromine
(4) argon and silicon

35 Which element reacts with oxygen to form ionic bonds?

- (1) calcium (3) chlorine
(2) hydrogen (4) nitrogen

36 The table below gives the atomic mass and the abundance of the two naturally occurring isotopes of chlorine.

Naturally Occurring Isotopes of Chlorine

Isotopes	Atomic Mass of the Isotope (u)	Natural Abundance (%)
^{35}Cl	34.97	75.76
^{37}Cl	36.97	24.24

Which numerical setup can be used to calculate the atomic mass of the element chlorine?

- (1) $(34.97 \text{ u})(75.76) + (36.97 \text{ u})(24.24)$
(2) $(34.97 \text{ u})(0.2424) + (36.97 \text{ u})(0.7576)$
(3) $(34.97 \text{ u})(0.7576) + (36.97 \text{ u})(0.2424)$
(4) $(34.97 \text{ u})(24.24) + (36.97 \text{ u})(75.76)$

37 Which general trends in first ionization energy and electronegativity values are demonstrated by Group 15 elements as they are considered in order from top to bottom?

- (1) The first ionization energy decreases and the electronegativity decreases.
(2) The first ionization energy increases and the electronegativity increases.
(3) The first ionization energy decreases and the electronegativity increases.
(4) The first ionization energy increases and the electronegativity decreases.

38 An aluminum sample has a mass of 80.01 g and a density of 2.70 g/cm^3 . According to the data, to what number of significant figures should the calculated volume of the aluminum sample be expressed?

- (1) 1 (3) 3
(2) 2 (4) 4

39 Given four particle models:

Which two models can be classified as elements?

- (1) I and II (3) II and III
(2) I and IV (4) II and IV

40 After being thoroughly stirred at 10.°C, which mixture is heterogenous?

- (1) 25.0 g of KCl and 100. g of H₂O
(2) 25.0 g of KNO₃ and 100. g of H₂O
(3) 25.0 g of NaCl and 100. g of H₂O
(4) 25.0 g of NaNO₃ and 100. g of H₂O

41 Which two compounds are electrolytes?

- (1) KOH and CH₃COOH
(2) KOH and C₅H₁₂
(3) CH₃OH and CH₃COOH
(4) CH₃OH and C₅H₁₂

42 Which statement explains why a CO₂ molecule is nonpolar?

- (1) Carbon and oxygen are both nonmetals.
(2) Carbon and oxygen have different electronegativities.
(3) The molecule has a symmetrical distribution of charge.
(4) The molecule has an asymmetrical distribution of charge.

43 Which temperature change indicates an increase in the average kinetic energy of the molecules in a sample?

- (1) 15°C to 298 K (3) 305 K to 0°C
(2) 37°C to 273 K (4) 355 K to 25°C

44 Given the particle diagram:

Which substance at STP can be represented by this particle diagram?

- (1) N₂ (3) Mg
(2) H₂ (4) Kr

45 Which type of equilibrium exists in a sealed flask containing Br₂(ℓ) and Br₂(g) at 298 K and 1.0 atm?

- (1) static phase equilibrium
(2) static solution equilibrium
(3) dynamic phase equilibrium
(4) dynamic solution equilibrium

46 What are the products when potassium hydroxide reacts with hydrochloric acid?

- (1) KH(s), Cl⁺(aq), and OH⁻(aq)
(2) K(s), Cl₂(g), and H₂O(ℓ)
(3) KCl(aq) and H₂O(ℓ)
(4) KOH(aq) and Cl₂(g)

47 In a titration, 20.0 milliliters of a 0.150 M NaOH(aq) solution exactly neutralizes 24.0 milliliters of an HCl(aq) solution. What is the concentration of the HCl(aq) solution?

- (1) 0.125 M (3) 0.250 M
(2) 0.180 M (4) 0.360 M

48 What fraction of a Sr-90 sample remains unchanged after 87.3 years?

- (1) $\frac{1}{2}$ (3) $\frac{1}{4}$
(2) $\frac{1}{3}$ (4) $\frac{1}{8}$

- 49 Which potential energy diagram represents the change in potential energy that occurs when a catalyst is added to a chemical reaction?

Key	
	reaction without catalyst
	reaction with catalyst

(1)

(3)

(2)

(4)

- 50 Which balanced equation represents a spontaneous radioactive decay?

- (1) $14\text{C} + \text{Ca}_3(\text{PO}_4)_2 \rightarrow 3\text{CaC}_2 + 2\text{P} + 8\text{CO}$
- (2) ${}^{14}_7\text{N} + {}^1_0\text{n} \rightarrow {}^{14}_6\text{C} + {}^1_1\text{p}$
- (3) $\text{H}_2\text{CO}_3 \rightarrow \text{H}_2\text{O} + \text{CO}_2$
- (4) ${}^{14}_6\text{C} \rightarrow {}^{14}_7\text{N} + {}^0_{-1}\text{e}$

Part B–2

Answer all questions in this part.

Directions (51–65): Record your answers in the spaces provided in your answer booklet. Some questions may require the use of the *2011 Edition Reference Tables for Physical Setting/Chemistry*.

Base your answers to questions 51 through 53 on the information below and on your knowledge of chemistry.

The balanced equation below represents the reaction of glucose, $\text{C}_6\text{H}_{12}\text{O}_6$, with oxygen at 298 K and 101.3 kPa.

- 51 Determine the mass of CO_2 produced when 9.0 grams of glucose completely reacts with 9.6 grams of oxygen to produce 5.4 grams of water. [1]
- 52 Compare the entropy of the reactants to the entropy of the products. [1]
- 53 Write the empirical formula for glucose. [1]
-

Base your answers to questions 54 and 55 on the information below and on your knowledge of chemistry.

The diagram below represents a cylinder with a movable piston. The cylinder contains 1.0 liter of oxygen gas at STP. The movable piston in the cylinder is pushed downward at constant temperature until the volume of $\text{O}_2(\text{g})$ is 0.50 liter.

- 54 Determine the new pressure of $\text{O}_2(\text{g})$ in the cylinder, in atmospheres. [1]
- 55 State the effect on the frequency of gas molecule collisions when the movable piston is pushed farther downward into the cylinder. [1]
-

Base your answers to questions 56 through 58 on the information below and on your knowledge of chemistry.

The formulas and the boiling points at standard pressure for ethane, methane, methanol, and water are shown in the table below.

Information for Four Compounds

Name	Formula	Boiling Point (°C)
ethane	$\begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\text{H} \\ \quad \\ \text{H} \quad \text{H} \end{array}$	-88.6
methane	$\begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H} \end{array}$	-161.5
methanol	$\begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H} \end{array}$	64.6
water	$\begin{array}{c} \text{H}-\text{O} \\ \\ \text{H} \end{array}$	100.0

- 56 Identify the compound that has the strongest intermolecular forces. [1]
- 57 State the change in potential energy that takes place in a sample of methane as it boils at -161.5°C . [1]
- 58 Explain, in terms of molecular polarity, why the solubility of methanol in water is greater than the solubility of methane in water. [1]
-

Base your answers to questions 59 through 61 on the information below and on your knowledge of chemistry.

The diagrams below represent ball-and-stick models of two molecules. In a ball-and-stick model, each ball represents an atom, and the sticks between balls represent chemical bonds.

Key
● = an atom of hydrogen
○ = an atom of carbon

Diagram A

Diagram B

- 59 Draw a Lewis electron-dot diagram for an atom of the element present in all organic compounds. [1]
- 60 Explain, in terms of carbon-carbon bonds, why the hydrocarbon represented in diagram B is saturated. [1]
- 61 Explain why the molecules in diagrams A and B are isomers of each other. [1]
-

Base your answers to questions 62 and 63 on the information below and on your knowledge of chemistry.

The nuts, bolts, and hinges that attach some gates to a playground fence can be made of iron. The iron can react with oxygen in the air. The unbalanced equation representing this reaction is shown below.

- 62 Balance the equation *in your answer booklet* for the reaction, using the smallest whole-number coefficients. [1]
- 63 Determine the change in oxidation state for oxygen in this reaction. [1]
-

Base your answers to questions 64 and 65 on the information below and on your knowledge of chemistry.

The pH of various aqueous solutions are shown in the table below.

pH of Various Aqueous Solutions

Aqueous Solution	pH
HCl(aq)	2
HC ₂ H ₃ O ₂ (aq)	3
NaCl(aq)	7
NaOH(aq)	12

- 64 Complete the table *in your answer booklet* by writing the color of thymol blue in the NaCl(aq) and in the NaOH(aq) solutions. [1]
- 65 State how many times greater the hydronium ion concentration in the HCl(aq) is than the hydronium ion concentration in the HC₂H₃O₂(aq). [1]
-

Part C

Answer all questions in this part.

Directions (66–85): Record your answers in the spaces provided in your answer booklet. Some questions may require the use of the *2011 Edition Reference Tables for Physical Setting/Chemistry*.

Base your answers to questions 66 through 68 on the information below and on your knowledge of chemistry.

There are six elements in Group 14 on the Periodic Table. One of these elements has the symbol Uuq, which is a temporary, systematic symbol. This element is now known as flerovium.

- 66 Identify an element in Group 14 that is classified as a metalloid. [1]
- 67 Explain, in terms of electron shells, why each successive element in Group 14 has a larger atomic radius, as the elements are considered in order of increasing atomic number. [1]
- 68 State the expected number of valence electrons in an atom of the element flerovium in the ground state. [1]
-

Base your answers to questions 69 through 72 on the information below and on your knowledge of chemistry.

A student made a copper bracelet by hammering a small copper bar into the desired shape. The bracelet has a mass of 30.1 grams and was at a temperature of 21°C in the classroom. After the student wore the bracelet, the bracelet reached a temperature of 33°C. Later, the student removed the bracelet and placed it on a desk at home, where it cooled from 33°C to 19°C. The specific heat capacity of copper is 0.385 J/g•K.

- 69 Explain, in terms of heat flow, the change in the temperature of the bracelet when the student wore the bracelet. [1]
- 70 Determine the number of moles of copper in the bracelet. [1]
- 71 Show a numerical setup for calculating the amount of heat released by the bracelet as it cooled on the desk. [1]
- 72 Explain, in terms of chemical activity, why copper is a better choice than iron to make the bracelet. [1]
-

Base your answers to questions 73 through 75 on the information below and on your knowledge of chemistry.

Seawater contains dissolved salts in the form of ions. Some of the ions found in seawater are Ca^{2+} , Mg^{2+} , K^+ , Na^+ , Cl^- , HCO_3^- , and SO_4^{2-} .

An investigation was conducted to determine the concentration of dissolved salts in seawater at one location. A 300.-gram sample of the seawater was placed in an open container. After a week, all the water had evaporated and 10. grams of solid salts remained in the container.

- 73 Determine the concentration, expressed as percent by mass, of the dissolved salts in the original sample of seawater. [1]
- 74 At standard pressure, compare the freezing point of seawater to the freezing point of distilled water. [1]
- 75 Explain why the evaporation that occurred during the investigation is an endothermic process. [1]

Base your answers to questions 76 through 78 on the information below and on your knowledge of chemistry.

A student makes an aqueous solution of lactic acid. A formula for one form of lactic acid is shown below.

The solution is placed in a sealed flask to be used in a laboratory investigation. The equation below represents the lactic acid equilibrium system in the flask.

- 76 Identify *one* organic functional group in a molecule of lactic acid. [1]
- 77 Explain, in terms of the reaction rates, why the concentrations of the reactants and products remain constant in this system. [1]
- 78 Explain, in terms of LeChatelier's principle, why increasing the concentration of $\text{H}^+(\text{aq})$ increases the concentration of lactic acid. [1]

Base your answers to questions 79 through 81 on the information below and on your knowledge of chemistry.

Copper can be used for water pipes in homes. When the pipes corrode, copper atoms oxidize to form Cu^{2+} ions in the water.

A homeowner has a water quality report prepared for a sample of water taken from pipes in the home. According to the report, the 550.-gram sample contains 6.75×10^{-4} gram of dissolved Cu^{2+} ions.

79 Using the key in *your answer booklet*, draw *two* water molecules in the box, showing the orientation of *each* water molecule toward the Cu^{2+} ion. [1]

80 Show a numerical setup for calculating the concentration, in parts per million, of dissolved Cu^{2+} ions in the sample of water tested. [1]

81 Write a balanced half-reaction equation for the corrosion that forms the Cu^{2+} ions. [1]

Base your answers to questions 82 through 85 on the information below and on your knowledge of chemistry.

A breeder reactor is one type of nuclear reactor. In a breeder reactor, uranium-238 is transformed in a series of nuclear reactions into plutonium-239.

The plutonium-239 can undergo fission as shown in the equation below. The X represents a missing product in the equation.

82 Determine the number of neutrons in an atom of the uranium isotope used in the breeder reactor. [1]

83 Based on Table N, identify the decay mode of the plutonium radioisotope produced in the breeder reactor. [1]

84 Compare the amount of energy released by 1 mole of completely fissioned plutonium-239 to the amount of energy released by the complete combustion of 1 mole of methane. [1]

85 Write a notation for the nuclide represented by missing product X in this equation. [1]

munotes
